

ResourceX - Business Model & Pricing Proposal

Purpose

Summarize the business model discussed for ResourceX.

Project Vision

ResourceX is a B2B SaaS platform. Organizations subscribe to the platform, while students, staff, or employees use it under their organization's subscription.

Target Customer

Paying Customer: Organization (College, Company, NGO, etc.)
Platform Users: Students, Faculty, Staff, Employees.

Revenue Model

Organizations pay a subscription fee. Individuals do not pay separately.

Recommended Pricing Model

Use a hybrid model: every subscription includes a fixed number of active users and monthly resource requests. Organizations upgrade or pay overage charges if they exceed limits.

Benefits

- Fair for small and large organizations.
- Predictable recurring revenue.
- Scalable business model.
- Easy to justify during project evaluation.

Suggested Plans

Plan	Active Users	Requests/Month	Fee
Starter	Up to 100	Up to 500	Free
Professional	Up to 500	Up to 5,000	■2,999 (Example)
Enterprise	Unlimited	Unlimited	Custom

Workflow

1. Organization registers.
2. Chooses a plan.
3. Admin adds users.
4. Users submit resource requests.
5. System tracks active users and monthly requests.

6. Dashboard displays usage and analytics.
7. Upgrade suggested if limits are exceeded.

Professor's Expectations

Revenue model, organization subscriptions, role-based access, approval workflow, analytics dashboard, scalable architecture, REST APIs, and future API integrations.

Final Recommendation

Finalize a B2B SaaS subscription model where organizations pay, users access through their organization, and pricing scales with organization size and usage.
